The Service Teaching Landscape in 2013

Day 1 – Parallel III (16.00-16.30)

Early in 2012 the Mathematics Statistics and Operational Research discipline at the Higher Education Academy set up a small working group to look at the area of service provision in the Mathematical Sciences in the UK. For the purposes of this work, service teaching provision has been taken to mean the teaching of Mathematics, Statistics and Operational Research to students in other disciplines by members of staff who are subject specialists in the Mathematical Sciences. One of the activities of the working group has been to investigate the current landscape with regard to service provision. A short survey was designed and circulated to Departments in the Mathematical Sciences. The findings of this work will be presented at the conference. Delegates interested in this area may also wish to attend the accompanying follow-on workshop.
