mathcentre: Online open-access mathematics learning resources

Day 1 – Parallel III (17.00-17.30)

Developed in 2003 as an online drop-in mathematics learning support centre to assist students in a variety of disciplines with their learning of mathematics, mathcentre has evolved into a highly respected source of mathematics support materials for students and a valuable repository of reports and guides for mathematics support practitioners. This presentation will examine mathcentre today discussing recent contributions for both staff and students including those to the mathcentre Communities Project which was established in 2009 to enable academics and support practitioners to contribute resources developed at other institutions. Recent analysis has provided insights into mathcentre users and how the vast range of resources are used. The presentation will show how mathcentre is meeting the needs of a diverse student and mathematics support community.
