Teaching and Learning Challenges in the delivery of Service Provision in the Mathematical Sciences

Day 1 – Parallel III (16.30-17.30)

Recently a small working group, convened by the Mathematics Statistics and Operational Research discipline at the Higher Education Academy, has been active in discussing areas impacting on service provision in the Mathematical Sciences. As part of this activity an event was run in May 2013 at which participants had the opportunity to share their experiences associated with the teaching of Mathematics, Statistics and Operational Research to students in a range of other disciplines. This participative workshop follows on from that event and aims to promote discussion of some of the teaching and learning challenges which face staff who are working in this area.
